

MASCO SCHOOL REOPENING HAND HYGIENE, CLEANING, AND DISINFECTING TIPS

The most important thing concerning hand hygiene is that you have product available in key locations. These will include entry ways and exits, and in the cafeteria where the students will pick up their trays. In the classroom, the 550mL bottles would be best. Those will be more readily available, and you can save your dispensers for the high traffic locations.

High touch surfaces need to be disinfected with ECO. Not every single surface needs to be disinfected if it is not high touch. Focus on the door handles, desks, handrails, and restrooms. Also, you need to stress that custodians shouldn't shy away from regular cleaning (with an all-purpose cleaner) either. Normal cleaning removes dirt and dust, which still improves the overall health of a facility. Please review the Honors training procedures or call Masco and talk with a representative for training on proper cleaning procedures.
